SUBJECT INDEX

Abdominal ganglia, insect 327
  acetylcholine 343
  biogenic amines 347
    dopamine 350, 396
    histamine 358, 397
    5-HT 349, 396
    octopamine 357
  blowflies 396
  cockroach 395
  Drosophila 396
  functions controlled by 330
  GABA 344
  glutamate 344
  locust 392
  moth 392
  neuroactive substances 341
  neuropeptides 360, 397
    allatostatins 387
    allatotropins 385
    bursicon 388
    corazonin 387
    CRF-like diuretic peptides 382
    crustacean cardioactive peptide 368
    FMRFamide-related peptides 363
    leukokinin-related peptides 379
    myomodulin-like peptide 374
    pigment-dispersing factors 388
    proctolin 369
    pyrokinins, myotropins, PBANs and other FXPRLamide-related peptides 373
    tachykinin-related peptides 385
  organisation 330–341
  taurine 347
Abdominal nerves, insect, peripheral organisation and targets 333
Abdominal neurons, insect, organisation 335
Acetylcholine
  effect of adenosine A_2 receptors on release 172, 180
  induced pH changes in glial cells 85
  insect abdominal ganglia 343
  interaction with glutamate receptors in thalamus 62
  in nucleus tractus solitarius, cardiovascular control 32
Acetylcholinesterase, in brain in Alzheimer's disease 241
ACTH
  evolution 426
  stress 423
    central adaption syndrome 578, 585, 588, 592, 601
    fish 430
    immune response 435
    invertebrates 430
Adaption, stress 425, 570
  behaviour 570
  central adaption syndrome 593–598
  cortical and limbic systems 589
  developmental modification 600
  genetics 599
  HPA system 592
  monoaminergic systems 590
  psychopathology 598–603
Adenosine
  activation of A_2 receptors, origins 182
  effect on acetylcholine release 173
  effect on glutamate release 174
  neuroprotective effect in ischaemia 155
  in nucleus tractus solitarius, cardiovascular control 29
Adenosine-3',5'-monophosphate
  adenosine induced accumulation in brain 168, 180
  induced pH changes 91
  role in endothelial cells 260
Adenosine A_1 receptors
  adenosine A_2 receptor interaction 179
  in nucleus tractus solitarius 29
Adenosine A_2 receptors 168
  adenosine origin 182
  desensitization 181
  distribution in nervous system 169
  function in nervous system 172
    carotid body chemosensory activity 178
    locomotor activity and behaviour 177
    modulation of CNS control of autonomic function 178
    modulation of neuronal excitability 176
    modulation of neurotransmitter release 172
    modulation of synaptic plasticity 177
    seizures 177
  G-protein coupling 171
  interaction with other receptors 178
  molecular structure 170
  in nucleus tractus solitarius 29
  subtypes 169
  therapeutic implications 182
  up-regulation 181
H^+-Adenosine triphosphatase, glial cells 82
Na^+,K^+-Adenosine triphosphatase
  excitotoxicity 624
  in neocortex, hypoxia induced inhibition 138
Adenylate cyclase, in cerebral microvessels 259
Adrenaline
  evolution 428
  in nucleus tractus solitarius 32
  stress, invertebrates 430
Adrenal medulla
  cellular composition 309
  growth factors 308–320
    biological activities 319
    ciliary neurotropic factor 319
    fibroblast growth factors 309
    insulin-like growth factors 319
    interleukins 317
    neurotropins 318
    transforming growth factor-β 310
α1-Adrenergic receptors
  brain microvessels 259, 260
  central stress response 585
  nucleus tractus solitarius 31
α1-Adrenergic receptors
  nucleus tractus solitarius 31
β-Adrenergic receptors
  agonist-induced down regulation 561
  brain microvessels 259, 260
  central stress response 584, 591
  human diseases 564

nucleus tractus solitarius 32
regulation of G-protein-linked receptor expression 560
regulation of G-protein-linked receptor function 556
RNA binding proteins 562
After potentials, neocortical neurons 525
Ageing
Alzheimer's disease 242
loss of nigrostriatal dopaminergic neurons 6
metabolic abnormalities in neurological disease 615
AIDS
cannabinoids 302
cerebral endothelial cells 266
microglia 452
Alcohol, nucleus tractus solitarius and cardiovascular control 41
Allatostatins, insect abdominal ganglia 387
Allatotropins, insect abdominal ganglia 385
Alzheimer's disease
adenosine A_2 receptors 182
damage to basal forebrain cholinergic pathways 239
causes 242
excitotoxicity 618
metabolic abnormalities 615
microglia 453
selegiline 13
AM630 281
Amantadine, Parkinson's disease 9
Amines, interaction with glutamate receptors in thalamus 61
Amino acids, transport by cerebral endothelial cells 264
Aminoalkylindoles, binding to cannabinoid receptors 279, 280
1S,3R-Aminocyclopentane-1,3-dicarboxylate 58, 62
responses in nucleus tractus solitarius 24
2-[(2-Aminoethylamino)carbonylethyl-phenylethylamino]-5'-*N*-ethylcarboxamidoadenosine, binding in brain 169
α-Amino-3-hydroxy-5-methyl-4-isoxazolopropionic acid (AMPA) receptor 57, 616
neurodegeneration 623
in thalamus 58, 60, 64
α-Amino-3-hydroxy-5-methyl-4-isoxazolopropionic acid (AMPA) receptor antagonist, neuroprotective effect 154
4-Aminopyridine model of epileptiform discharge 533
Amoeboid microglia 442, 443
Amygdala
arousal of fear and anxiety 575–577
stress and noradrenaline release 581
Amyloid precursor protein
Alzheimer's disease 243
in chromaffin cells 321
Analgesia, neuropeptide FF 464, 481
Anandamide 276, 277
in brain 280
physiological and pharmacological actions 279, 280
Angiotensin II, in nucleus tractus solitarius, cardiovascular control 36
Angiotensin II receptors, in nucleus tractus solitarius 37
Angiotensin-converting enzyme, in brain microvessels 262
Anomalous rectification 523
Anoxic depolarisation 137, 154
Antigens, stress 435
Antioxidants, Parkinson's disease 7, 10
Anxiety
arousal 575, 582
cannabinoids 298
Apolipoprotein E, Alzheimer's disease 243
Arachidonic acid, metabolism in brain and other endothelial cells 256
Arginine, release in thalamus 67
Aspartate
effect of adenosine A_2 receptors on release 174
induced pH changes in glial cells 85
Associative brain, stress response 571, 602
Astrocytes, effect on cerebral endothelial cells 266
Atrial natriuretic peptide
effect on brain microvessels 261
in nucleus tractus solitarius, cardiovascular control 36
Autonomic function, adenosine A_2 receptors 178
Axonal labyrinths 120
Axonal regeneration 221
Axonal sprouting 221
Axoplasmic transport tracers 107

Baroreceptor afferent terminals in NTS, neurotransmitters 23–26
Baroreceptor reflex
adenosine A_2 receptors 178
neuromodulation 26–43
neurotransmitters 23
Barosensitive neurons 22, 23
Basal forebrain cholingergic neurons 220
degeneration and regeneration 229
Alzheimer's disease 239
basalo-cortical pathway 236
septo-hippocampal pathway 229
Basal ganglia, adenosine A_2 receptors in 169
Basalo-cortical pathway, degeneration and regeneration 236
BCECF, pH in glial cells 74
Behaviour
adenosine A_2 receptors 177
environmental demands and adaptive modification 570, 595–598
genetic influences 599
neonatal enucleation 204
neuropeptide FF 482
Bicuculline, epileptiform response in human neocortex 531, 539
Bioenergetics
excitotoxicity 623–627
neurological disease 614, 615
Biogenic amines
evolution 428
insect abdominal ganglia 347, 392, 396
stress 430, 432, 434, 581–585, 590
Black–white discrimination, effect of neonatal enucleation 204
Blood-brain barrier
endothelial cells 263
astrocyte influences 266
neuronal influences 267
microglia 443, 445, 447, 448
role in immune reactions 266

Blood pressure, adenosine A_2 receptors 178
Blowflies, abdominal ganglia 396
Bradykinin, in nucleus tractus solitarius, cardiovascular control 40
Brain-derived neurotrophic factor
  in adrenal medulla 318
  effect on basal forebrain cholinergic neurons 226, 231, 232
  Parkinson's disease 10
Brain oedema, effect of histamine H_2 receptor blockers 265
Brain-specific antigens, cerebral endothelial cells 266
Bridge transplants 232
Bursicon, insect abdominal ganglia 388, 394
Bursting neurons, neocortex 133, 135, 526, 546

619C89, neuroprotective effect 155
Cadherins 227
Caffeine
  interaction with adenosine A_2 receptors 177, 179, 181
  effect on locomotor activity 177
Calcitonin gene-related peptide
  in nucleus tractus solitarius, cardiovascular control 41
  sprouting of primary afferent fibres 119
Calcitonin gene-related peptide receptors, adenosine A_2 receptor interaction 180
Calcium
  excitotoxicity 626
  in neocortex, effect of hypoxia 138
  relationship with pH in glial cells 88
Calcium antagonists, neuroprotective effects in ischaemia 155
Calcium channels, pH changes 92
Calcium currents, neocortical neurons 525
Callitachykinins 385
Cannabidiol 277
Cannabinoids 276
  activation of receptors 278
  agonists 278
  antagonists 280
  endogenous ligands 280
  medical uses 302
  membrane perturbation theory 278
  neurobehavioural effects 296
Cannabinoid receptors 275–305
  activation 278
  endogenous ligands 280
  molecular biology, cloning 281–286
  protein structure 283, 285, 292
  tissue specific 282
Cannabinoid receptor genes
  cloning 281–286
  molecular and structural characteristics 286–295
    helix net 292
    intronless 286
    protein sequence analysis 292
  neurobehavioural specificity 301
Cannabinol 277
Capsaicin, deafferentation 119, 122
Carbon dioxide buffering, glial cells 82
Carbonic anhydrase, H^+ buffering in glial cells 78, 90, 94
Cardiovascular control, neurochemical modulation, nucleus tractus solitarius 21–53
  acetylcholine 32
  adenosine 29
  adrenaline 32
  alcohol 41
  angiotensin II 40
  bradykinin 40
  dopamine 30
  GABA 26
  glycine 28
  5-HT 33
  natriuretic peptide 35
  neuropeptide Y 34
  neurotransmitter at baroreceptor afferent terminals in NTS 23
  nitric oxide 28
  noradrenaline 31
  opioids and related peptides 38
  salt 41
  substance P and other tachykinins 39
  vasopressin 37
Carotid body, effect of adenosine A_2 receptors on chemosensory activity 178
Catecholamines, in nucleus tractus solitarius, cardiovascular control 30
Cell adhesion molecules 227
Cell death, microglia 443, 454, 456
Central adaption syndrome, stress 589, 593
  adaptions controlled by controllable experiences 595
  adaptions triggered by uncontrollable experiences 596
c-fos, effect of ischaemia 143
CGS 15943, binding in brain 169
CGS 21680
  effect on acetylcholine release 173
  binding in brain areas 169
    effect of guanine nucleotides 171, 172
  effect on GABA, glutamate and aspartate release 174
  effect on locomotor activity 177
  effect on neuronal excitability 176
  effect on noradrenaline release 175
  effect on seizures 177
Chemical deafferentation 199, 122
Chemosensory receptors, carotid body, effect of adenosine A_2 receptors 178
Chloride, in neocortex, effect of hypoxia 138
Chloride/bicarbonate exchanger, glial cells 79
Chloride current, pH changes 92
Cholecystokinin, in nucleus tractus solitarius, cardiovascular control 40
Cholera toxin B subunit, axoplasmic transport 108
Choline, transport by cerebral endothelial cells 265
Cholinergic neurons, basal forebrain 220
  degeneration and regeneration 229
    Alzheimer's disease 239
    basalo-cortical pathway 236
    septo-hippocampal pathway 229
Cholinergic neurons, insect abdominal ganglia 343
Cholinergic system, effect of adenosine A_2 receptors 172
8-(3-Chlorostyryl)caffeine(CSC), binding in brain 169
Chromaffin cells
  granins and amyloid precursor protein 321
  growth factors
    biological activities 319
  ciliary neurotrophic factor 319
  fibroblast growth factors 309
  insulin-like growth factor 319
  interleukins 317
  neurotrophins 318

transforming growth factor-β 310
Chromagranin A and B 321
Chromstatin 321
Ciliary neurotrophic factor, in adrenal medulla 319
Cockroach abdominal ganglia 395
acetylcholine 343
biogenic amines 353
motoneurons 337
neuropeptides 360–392
Collateral sprouting 223
forebrain cholinergic pathway 231
Colliculus superior, changes after neonatal enucleation 192, 202
Complex I, deficits in Parkinson's disease 616
Coping strategies, stress 573, 574, 595, 601
Corazonin, insect abdominal ganglia 387
Cortical command, movement, transmission 489–517
Cortical function
calcium antagonists 155
development 151
hypoxia induced alterations 135, 151
intrinsic cellular properties 132
ischaemia induced alterations 140, 152
lesions 144, 153
multiple causes of dysfunction 148
network properties 143
neuroprotective effects of glutamate antagonists 154
neuroprotective effects of neurotransmitters and neuromodulators 155
sodium antagonists 155
Corticosteroids, central stress response 586–589, 592, 598
Corticotropin releasing factor-like diuretic peptides, insect abdominal ganglia 382
Corticotropin-releasing hormone
evolution 426
stress 424
central adaption syndrome 575, 577, 579, 583, 585, 586, 588, 592, 601
immune response 434
invertebrates 430
CP 55,940 277, 280, 281
CP 66,713, effect on noradrenaline release 175
Cross-modal effects of neonatal enucleation 205
Crustacean cardioactive peptide, insect abdominal ganglia 368, 392, 395
C-type natriuretic peptide 35
Cutaneous inhibition of propriospinal premotoneurons 508, 513
6-Cyano-7-nitroquinoxaline-2,3-dione(CNQX) 24, 57, 59, 60, 85, 140
Cytokines
chromaffin cells 317
evolution 428
HPA axis 424
microglia 454
stress, invertebrates 432

DATATOP study 11
Degeneration, forebrain cholinergic pathways 229
Alzheimer's disease 239
basalo-cortical pathway 236
septo-hippocampal pathway 229
Depolarization
glial pH 87
hypoxia 135
ischaemia 141
proton activated 92
Depolarization-induced alkalization, glial cells 88
Desensitization, agonist-induced in G-protein-linked receptors 556
Development
cortical function
effect of hypoxia 151
effect of ischaemia 152
effect of lesions 153
fibroblast growth factor in adrenal medulla 310
microglia 442, 443, 455
modulation of stress responsiveness 600
neuronal plasticity induced by enucleation 191–218
neuropeptide FF receptors in brain 478
plasticity of primary afferent projections to dorsal horn 121
Dextromethorphan, neuroprotective action 154
Diabetes, nucleus tractus solitarius, neuropeptide Y 35
4',5'-Dimethyl-5,6-carboxyfluorescein, pH in glial cells 74
3,7-Dimethyl-1-propargylxanthine, binding in brain 169
1,3-Dipropyl-8-cyclopentylxanthine
effect on neuronal excitability 176
effect on noradrenaline release 175
1,3-Dipropyl-8-*p*-sulfophenylxanthine 29
Disfacilitation, propriospinal premotoneurons 501, 503–506, 513
Disinhibition model of epileptiform discharge 531
Diuretic peptides, insects 382
Dizocilpine, Parkinson's disease 9
L-Dopa, neurotransmitter at baroreceptor afferents in NTS 26
Dopamine
effect of adenosine A_2 receptors on release 175
catabolism and generation of hydroxyl radical in Parkinson's disease 5
central stress response 582, 591
evolution 428
insect abdominal ganglia 350, 353–357, 392, 396
metabolic compensation in Parkinson's disease 223
in nucleus tractus solitarius, cardiovascular control 30
stress, invertebrates 430
Dopamine D_1 receptors, adenosine A_2 receptor interactions 179
Dopamine D_2 receptors
adenosine A_2 receptor interactions 178
in nucleus tractus solitarius 30
Dopamine transporter blockers, Parkinson's disease 9
Dopaminergic neurons
age-dependent loss, Parkinson's disease 6
neuromelanin 8
oxidative stress 3
Dorsal horn 106
laminar and somatotopic organization of neurons 108
primary afferent projections 107
plasticity, adult 118
plasticity, neonatal 121
somatotopic organization 108
Dorsal rhizotomy 118
Dorsal unpaired median neurons, insect abdominal ganglia 339, 403
Dronabinol 279

Drosophila 396
acetylcholine 344
histamine 397
monoamines 396
neuropeptides 364–392, 396
Dynorphin-related peptides, central stress response 585

Eclosion hormone 389
Eicopentanoic acid, metabolism in cerebral endothelial cells 259
Emotional stress 433, 575, 594
β-Endorphin, central stress response 585
Endothelial cells, brain
common features with other organs
arachidonic acid metabolism 256
general markers 256
second messenger systems 259
synthesis and secretion of substances 261
unique features
biochemistry 262
function 262
induction of blood-brain characteristics 266
structure 262
Endothelins
in nucleus tractus solitarius, cardiovascular control 41
production by cerebral microvessels 262
Endothelium-derived contracting factor 262
Endothelium-derived relaxing factor 261
Endothelium-specific antibodies, cerebral endothelial cells 266
Enkephalin, central stress response 585
Enucleation, neonatal 191
behavioural studies 204
biochemical studies 211
changes in pial angioarchitecture 196
changes in retino-geniculo-cortical pathways 192
changes in visual callosal connections 195
cross-modal effects 205
mechanisms of plasticity 212
physiological changes 202
Environment
adaptive modification of behaviour 570, 601
Alzheimer's disease 243
Epileptic focus 147
Epileptiform activity, human neocortex *in vitro*
4-aminopyrine model 533
disinhibition model 531
inhibitory mechanisms 548
magnesium-free model 535
methodology 520
neuron characteristics 526
stimulus-induced activity 540
synaptic mechanisms 528
Ethopropazine, Parkinson's disease 9
5'-*N*-Ethylcarboxamidoadenosine (NECA) 29
effect on acetylcholine release 172, 174
binding in brain areas 169
effect on glutamate and aspartate release 174
effect on neuronal excitability 176
effect on noradrenaline release 175
Evolution, stress 426, 571
Excitatory amino acids
effect of adenosine A_2 receptors on release 174
microglia 454
neurotransmission in baroreceptor terminals in NTS 24
Excitatory amino acid receptors 616
pH changes in glial cells 84, 85
in thalamus 56
Excitatory postsynaptic potentials, human neocortical neurons 528
Excitotoxicity 237, 614
free radicals 626
impaired mitochondrial calcium buffering 626
inhibition of Na^+,K^+-ATPase 624
metabolic inhibition 619
neurological disease 618–627
Extracellular space, H^+ buffering 76

Facial nerve lesions, microglia 448
Fast spiking cells 133
Fatty acids, effect of neonatal enucleation on incorporation 212
Fear, arousal 575, 582
Fetal neuron transplants 235, 239
Fibroblast growth factors
chromaffin cells 309, 312, 313
Parkinson's disease 10
regeneration of CNS neurons 227
Fimbria-fornix lesions, degeneration and recovery 230
Fish, stress response 429, 433
Flexor carpi radicals H reflex 494–496
Fluorescent dyes, pH in glial cells 74
Fluoride-resistant acid phosphatase, sprouting of primary afferent fibres 119, 121
FMRFamide-related peptides
insect abdominal ganglia 363, 393, 395
neuropeptide FF 474
Focal ischaemia, neocortex 140
Forebrain cholinergic neurons 220
degeneration and regeneration 229
Alzheimer's disease 239
basalo-cortical pathway 236
septo-hippocampal pathway 229
Free radicals
excitotoxicity 626
generation in tissues 2
Parkinson's disease 3, 4, 7
FXPRLamide-releated peptides, insect abdominal ganglia 373

GABA
effect of adenosine A_2 receptors on release 174
induced pH changes in glial cells 83
insect abdominal ganglion 344, 346, 392
nucleus tractus solitarius, cardiovascular control 26, 41
$GABA_A$ receptors
neocortex 135, 529, 539, 548
effect of hypoxia 140
nucleus tractus solitarius, baroreceptor reflex 27
pH changes in glial cells 83
$GABA_B$ receptors
neocortex 135
effect of hypoxia 140
nucleus tractus solitarius 27
GABAergic neurons, thalamus 60, 65
GABAergic system in neocortex, effects of hypoxia, ischaemia and lesions 149, 156
Galanin, in nucleus tractus solitarius, cardiovascular control 41

Ganglia, insect abdominal 327
  acetylcholine 343
  biogenic amines 347
    dopamine 350, 396
    histamine 358, 397
    5-HT 349, 396
    octopamine 357
  blowflies 396
  cockroaches 395
  Drosophila 396
  functions controlled by 330
  GABA 344
  glutamate 344
  locust 392
  moth 392
  neuroactive substances 341
  neuropeptides 360, 397
    allatostatins 387
    allatotropins 385
    bursicon 388
    corazonin 387
    CRF-like diuretic peptides 382
    crustacean cardioactive peptide 368
    FMRFamide-related peptides 363
    leukokinin-related peptides 379
    myomodulin-like peptide 374
    pigment-dispersing factors 388
    proctolin 369
    pyrokinins, myotropins, PBANs and other FXPRLamide-related peptides 373
    tachykinin-related peptides 385
  organization 330–341
  taurine 347
Gangliosides, neuronal regeneration 227, 237
GAP-43, neuronal regeneration 228
Gap junctional conductance, proton modulation 95
General adaption syndrome 422, 570
Genetics, stress responsiveness 599
Geniculo-cortical topography, changes after neonatal enucleation 193
Glial cells
  effect on cerebral endothelial cells 266
  effect of hypoxia-ischaemia 150
  inhibition of axon regeneration 222
  pH regulation and proton signalling 74
    activity-induced transients 85
    carbonic anhydrase 78
    gap junctional conductance 95
    H^+ buffering 76
    H^+ pumps 82
    hormone and growth factor induced changes 90
    interrelationship between intracellular Ca^{2+} and pH 88
    metabolism 96
    methods of measurement 74
    model of H^+ dynamics during neuronal activity 89
    Na^+/H^+ and Cl^-/HCO_3^- exchangers 79
    Na^+-HCO_3^- cotransporter 79
    neuronal excitability 94
    neurotransmitter-induced changes 83
    steady-state values 75
    synaptic transmission 92
  thalamus, glutamate receptors 59, 65
Glial derived neurotrophic factor, chromaffin cells 317
Glial scar 222
Global ischaemia, neocortex 141, 149
Glucocorticoids
  central stress response 586–589, 592
  evolution 427
  regulation of G-protein-linked receptor expression 560
Glucose
  transport in cerebral endothelial cells 263
  utilization in brain after neonatal enucleation 211
Glutamate
  effect of adenosine A_2 receptors on release 174
  baroreceptor terminals in nucleus tractus solitarius 23
    adenosine interaction 30
    ethanol interaction 41
  excitotoxicity 618
    free radicals 626
    impaired mitochondrial calcium buffering 626

  excitotoxicity 618
  microglia 451

Joining peptide, nucleus tractus solitarius, cardiovascular control 39

Kainate, induced intraglial acidification 85
Kainate receptors 616
  neurodegeneration 623
  thalamus 57, 58, 60, 64
KF17837, binding in brain 169
Kyte-Doolittle hydrophilicity plot, cannabinoid receptors 293, 296–299

Laminar organization
  dorsal horn neurons 108
  primary afferent projections 107
Lamotrigine 620
Lateral geniculate body dorsal nucleus, neonatal enucleation 192, 202
Learned helplessness 590, 596
Learning, neuropeptide FF 482
Lectins
  axoplasmic transport 107
  cerebral endothelial cells 263
Leucokinin-related peptides, insect abdominal ganglia 378–383, 399
Leucomyosuppressin, insects 364
Leucopyrokinin 373
Leucosulfakinin 364
Levonantradol 277
Limbic system
  adaptive modification and stress 589
  arousal of fear and anxiety 575
  neuropeptide FF 469
  noradrenaline release and stress 581
Lipid peroxidation, Parkinson's disease 8
Locomotor activity, role of adenosine A_2 receptors 177
Locus coeruleus, noradrenergic system and stress 577, 581
Locust abdominal ganglia 392
  motoneurons 337
  neuropeptides 363–392
  sensory neurons 336
Locust male accessory gland myotropin-1 386
Locust myoinhibitory neuropeptide 389
Locust ovary-maturing parsin 390–392
Locustamyotropin, abdominal ganglia 373, 374, 392, 393
Locustatachykinins, abdominal ganglia 385
Long-term potentiation, modulation by adenosine A_2 receptors 177
Lymphocytes, neuropeptide FF 483
Lymophokines, neuronal regeneration 227

Macrophage/microglia inhibitory factor 455
Macrophages, microglia 442
Magnesium-free model of epileptiform discharge 533
Malonate, neuropathological damage 619, 620
Marijuana, cannabinoid receptor genes 275–305
Mazindol, Parkinson's disease 9
Medulla, neuropeptide FF 474
Melanocyte stimulating hormone, in nucleus tractus solitarius 39
Melatonin, insect nervous system 349
Memantine 155
Membrane conductance, proton-mediated alteration 91
Membrane potential, excitotoxicity 624
Mental disease, stress 602
Metabolic compensation, brain damage 223
Metabolic inhibitors, neuropathological damage 619
Metabotropic glutamate receptors 58, 616, 617
  adenosine A_2 receptor interaction 180
  lesion and ischaemia induced neuronal dysfunction 154
  neurodegeneration 623
  nucleus tractus solitarius 25
  thalamus 59, 61, 64
Metallothionein, 6-hydroxydopamine-mediated parkinsonism 5
N-Methyl-D-aspartate (NMDA) receptors 57, 616, 617
  baroreceptor terminals in nucleus tractus solitarius 24
  excitotoxicity 618, 624
  neocortex 135, 529, 533

You Benefit With Disk Submission

Elsevier Science encourages the submission of articles on disk. We want Authors to provide us with their final manuscripts directly from their computer or word processing systems, without the need to follow complicated instructions. If you submit electronic manuscripts, you will notice the benefits:

- **A speedier publication process**
- **A clearer set of proofs, with fewer errors**
  Providing electronic manuscripts will improve the delivery of proofs - delivery will be faster and more reliable. Also, without needing to rekey the text the possibility of introducing errors will be avoided
- **Inclusion in an electronic archive**
  Elsevier Science is committed to developing and maintaining electronic archives for all of its journals. This will provide the flexibility to take advantage of electronic media to disseminate the information published in our journals, including your article.

There are some basic points to be kept in mind and we do have certain preferences. However, with Elsevier's expertise and facilities it does not really matter on which computer or wordprocessing system your manuscript has been prepared.

Basic Points to Help Us

Delivery of Electronic Files
Disks must be clearly marked with the following information:

- **Operating system**
- **Disk format (e.g.DS/DD)**
- **Word Processor used, including version number (users of see later)**
- **Authors' names**
- **Short title of article**

Three printed copies of the final version of the manuscript should be submitted with the disk to the Journal Editor.
In the event of differences between disk and hardcopy, the hardcopy will be considered as the definitive version.

Preparing Electronic Text Files

Please follow the general instructions on style and arrangement and, inparticular, the reference style as given in Notes for Authors for the book or journal concerned. If you are contributing to a multi-author work, please consult the publisher or earlier volume for style conventions with respect to headings, reference citation, etc.

LaTeX/TeX

Authors wishing to submit their article as a LaTeX/TeX file should note the following:
Authors should ideally use the "Article" style or the Elsevier LaTeX package which is available via anonymous FTP from CTAN centres.
(Further details on TeX can be obtained from Martin Key or Sebastian Rahtz)

Host names:	**CTAN directory:**
ftp.dante.de	/tex-archive/macros/latex/contrib/supported/elsevier
ftp.tex.ac.uk	/tex-archive/macros/latex/contrib/supported/elsevier
ftp.shsu.edu	/tex-archive/macros/latex/contrib/supported/elsevier

Authors should not add their own macros

Preparing Electronic Graphic Files

Illustrations should be produced in the Macintosh environment if possible using the following software packages:
Adobe Illustrator, Aldus Freehand, Cricket Graph, Macdraw, Chemdraw, Corel Draw for PC
However we will accept any of the popular drawing programs for the Macintosh and PC.
Artwork should be drawn for finished size using a Times or Helvetica typeface at a final size of 8pt type with appropriate lineweights.
Please indicate format, operating system, program and version number of the software used. If possible also print a directory of filenames.
Scanned artwork should be saved to Tiff format for both line and halftone and scanned at a suggested setting of 400 dpi for half-tones and 1000 dpi for linework. If it is necessary to compress the scans please indicate the software used. It is essential that a hard copy print of the scans be included. Illustrations should be logically named and saved as individual files to 3.5" disk or a SyQuest cartridge 44Mbyte or 88Mbyte. If 3.5" disks are not available to you, 5.25" disks are acceptable. Please send a laser print of the artwork with the electronic file.
When submitting electronic colour images please indicate the file format and program used (including compression software). Include a 4 colour machine or cromalin proof and check that all the separations (if provided) are colour identified.
